START·ALL®
Lithium-Ion Jump Starter & Power Pack

QUICKSTART GUIDE

READ MANUAL BEFORE USE

STEP ONE

Place Start-All® Jump-Pack on a flat surface and turn the main power switch ON. Make sure the display shows 50% charge or higher. It is recommended to fully charge the unit every night after use.

STEP TWO

Connect the clamps: Red clamp (+) to vehicle battery positive jump post and Black clamp (-) to vehicle battery ground.

STEP THREE

Make sure ignition key is in first position. When you get a solid Green “8” on the LED, the cables are active and you may start your engine. Once the “8” is a solid Green, you must attempt to start the vehicle within 45 seconds or the Start-All® Jump-Pack will time out. If time out occurs, you must turn off the unit and repeat the process.

If you do not get a solid Green “8”
Refer to the troubleshooting guide.

STEP FOUR

Once you have started your engine, turn off the Start-All® Jump-Pack and remove the clamps from the vehicle battery, and store your unit.
