FLEXTEC 450 MACHINE SCHEMATIC G6462-3

S28443 SWITCHBOARD		
LED #	COLOR	FUNCTION
1	GREEN	+5V DC POWER SUPPLY "OK"
2	GREEN	CAN POWER SUPPLY "OK"
3	GREEN	STATUS "OK"
3	RED	STATUS "ERROR" (CHECK CODE FOR SPECIFIC ERROR)
4	GREEN	+15V DC POWER SUPPLY "OK"

LIGHT	MEANING
CONDITION	
Steady Green	System OK.
Blinking Green	Occurs during startup or reset, and indicates that the switchboard is waiting
	for communication from the control board. Normal for the first 1-10
	seconds after power is turned on.
Alternating Green	A system fault has occurred. If the switchboard status LED is flashing any
and Red	combination of red and green, errors are present.
	Individual code digits are flashed in red with a long pause between digits. If more than one code is present, the codes will be separated by a green light.
	See Page 3 for an Error Code Troubleshooting Guide.

Description Possible Solution

	Primary Overcurrent
n	Peak current through the transformer primary has exceeded threshold (140 amps)
11	Verify connections to the switchboard, transformer and sutput restifier assemblies
ion 1	verify connections to the switchboard, transformer and output rectilier assemblies
i	are made correctly and there are no damaged components in the machine.
$\frac{100}{2}$	Replace defective main transformer.
ion 3	Replace defective switchboard assembly (S28443).
	Thermal Fault
n	Thermostat on output rectifier heat sink or embedded in transformer has tripped.
ion 1	Do not exceed allowable ambient temperature or duty cycle limits.
ion 2	Verify that fan is operating and airflow is not being blocked.
ion 3	Measure thermostats at control board and replace if defective.
	Capacitor Fault (Over-Voltage or Under-Voltage)
n	Input voltage is less than 160 VDC or more than 1050 VDC
ion 1	Verify input voltage level, frequency, and quality. Verify that line is not too soft.
	If problem occurs on a generator, verify proper operation when connected to
ion 2	municipal power lines.
ion 3	Replace defective switchboard assembly (S28443).
	CAN Communication Timeout
n	CAN communication between switchboard and control board has timed out
ion 1	Check the physical wiring and connections between control board and switchboard
ion 2	Verify nower supply to control board and switchboard
$\frac{1011 \ Z}{1000 \ 2}$	Penlage defective switchboard assembly (\$28442) or central board (\$28454)
1011 3	Replace delective switchboard assembly (528443) or control board (528454).
	Misconnection - Switchboard Supply Voltage too High
n	Switchboard auxiliary supply voltage is higher than 62 VDC at machine power-up.
ion 1	Improper input voltage configuration. Verify primary reconnect position, measure
	input voltage level and check three phase operation.
ion 2	Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC
	output at 14 pin connector to determine the source of the problem.
ion 3	Replace defective switchboard assembly (S28443).
	Misconnection - Switchboard Supply Voltage too Low
n	Switchboard auxiliary supply voltage is lower than 42 VDC at machine power-up.
ion 1	Improper input voltage configuration. Verify primary reconnect position, measure
	input voltage level and check three phase operation.
ion 2	Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC
	output at 14 pin connector to determine the source of the problem.
ion 3	Replace defective switchboard assembly (S28443).
	Switchboard Undervoltage Lock Out
n	
	Switchboard auxiliary supply voltage momentarily drops below 20 VDC.
ion 1	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC
ion 1	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem.
ion 1 ion 2	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft.
ion 1 ion 2 ion 3	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443).
ion 1 ion 2 ion 3	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443).
ion 1 ion 2 ion 3	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration
ion 1 ion 2 ion 3	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position.
ion 1 ion 2 ion 3 n	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine
ion 1 ion 2 ion 3 n ion 1	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram.
ion 1 ion 2 ion 3 n ion 1 ion 2	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454).
ion 1 ion 2 ion 3 n ion 1 ion 2	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454).
ion 1 ion 2 ion 3 n ion 1 ion 2 718	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454). Internal Control Board Error
ion 1 ion 2 ion 3 n ion 1 ion 2 718	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454). Internal Control Board Error The microprocessor on the control board has experienced a critical internal error and
ion 1 ion 2 ion 3 n ion 1 ion 2 718	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454). Internal Control Board Error The microprocessor on the control board has experienced a critical internal error and cannot continue.
ion 1 ion 2 ion 3 n ion 1 ion 2 718 n	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454). Internal Control Board Error The microprocessor on the control board has experienced a critical internal error and cannot continue. Cycle power to the machine.
ion 1 ion 2 ion 3 n ion 1 ion 2 718 n ion 1 ion 2	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454). Internal Control Board Error The microprocessor on the control board has experienced a critical internal error and cannot continue. Cycle power to the machine. Replace defective control board assembly (S28454).
ion 1 ion 2 ion 3 n ion 1 ion 2 718 n ion 1 ion 2	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454). Internal Control Board Error The microprocessor on the control board has experienced a critical internal error and cannot continue. Cycle power to the machine. Replace defective control board assembly (S28454).
ion 1 ion 2 ion 3 n ion 1 ion 2 718 n ion 1 ion 2	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454). Internal Control Board Error The microprocessor on the control board has experienced a critical internal error and cannot continue. Cycle power to the machine. Replace defective control board assembly (S28454). Internal Switchboard Error
ion 1 ion 2 ion 3 n ion 1 ion 2 718 n ion 1 ion 2	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454). Internal Control Board Error The microprocessor on the control board has experienced a critical internal error and cannot continue. Replace defective control board assembly (S28454). Internal Switchboard Error The microprocessor on the switchboard assembly (S28454).
ion 1 ion 2 ion 3 n ion 1 ion 2 718 n ion 1 ion 2 n	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454). Internal Control Board Error The microprocessor on the control board has experienced a critical internal error and cannot continue. Internal Switchboard Error The microprocessor on the switchboard has experienced a critical internal error and cannot continue.
ion 1 ion 2 ion 3 n ion 1 ion 2 718 n ion 1 ion 2 n	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454). Internal Control Board Error The microprocessor on the control board has experienced a critical internal error and cannot continue. Replace defective control board assembly (S28454). Internal Switchboard Error The microprocessor on the switchboard has experienced a critical internal error and cannot continue. Cycle power to the machine. Replace defective control board assembly (S28454). Internal Switchboard Error The microprocessor on the switchboard has experienced a critical internal error and cannot continue. Cycle power to the machine. Replace defective control board assembly (S28454). Internal Switchboard Error The microprocessor on the switchboard has experienced a critical internal error and cannot continue. Cycle power to the machine.
ion 1 ion 2 ion 3 n ion 1 ion 2 718 n ion 1 ion 2 n ion 1 ion 2	Switchboard auxiliary supply voltage momentarily drops below 20 VDC. Damaged auxiliary transformer or intermittent "A" lead connection. Verify 42 VAC output at 14 pin connector to determine the source of the problem. Verify input voltage level, frequency, and quality. Verify that line is not too soft. Replace defective switchboard assembly (S28443). Control Board Misconfiguration A jumper on the control board has been placed in the incorrect position. Verify that the wiring to connector J5 on the control board matches the machine wiring diagram. Replace defective control board assembly (S28454). Internal Control Board Error The microprocessor on the control board has experienced a critical internal error and cannot continue. Cycle power to the machine. Replace defective control board has experienced a critical internal error and cannot continue. Cycle power to the machine. Replace defective switchboard assembly (S28454). Internal Switchboard Error The microprocessor on the switchboard has experienced a critical internal error and cannot continue. Cycle power to the machine. Replace defective switchboard assembly (S28454).
