

# GAS CYLINDER CABINETS

The use of gas cabinets provides a convenient way to achieve separation of gases by their classifications to satisfy both national and local fire and building codes. The cylinder gas cabinets can safely store 1-4 standard size gas cylinders, are constructed of 11 gauge steel to exceed code requirements.

These cabinets can be fitted with manifolds, or the Harris EZ regulator mounting or other gas controls so that both the cylinder and the control system are enclosed. The cabinet has the capacity to allow 150–200 linear feet per minute of air to pass across the open window face to ensure that workers are not exposed.

Large shatter proof window permits visual inspection while minimizing operator exposure to potential toxic leaks

Louvered door panel to provide positive air flow

Large vent exhaust (6" diameter x 3" high)

Integral sprinkler that is activated in the event of fire

Removable back panel enables the mounting of gas delivery systems and components

Adjustable cylinder brackets with chains secure a wide range of cylinders

*Harris offers a full line of manifolds that can be configured and shipped to you installed in the cabinet.*
