LINCOLN ELECTRIC AUTOMATION

# Laser-Pak PPL

LASER SYSTEMS

# FASTER WELD HOTTER WIRE LESS DISTORTION

[DOWNLOADABLE CONTENT](#)

Precision Power Laser™ (PPL™) is TIG quality at 3 times MIG speed. It produces a weld deposit at high travel speeds with independent control of power inputs of the weld. As a completely non-synergic process, no longer are the limitations of an arc defining factors in weld speed, size, and quality. Travel speeds in excess of 3m/min are possible, depending on material thickness and laser power being used. PPL can be implemented to help improve production rates and increase quality using the Lincoln Electric Automation™ Laser-Pak™ PPL™ laser system.

## COMPARED TO OTHER WELDING METHODS, PPL CAN OFFER...

**INCREASED TRAVEL SPEEDS**

**LESS DISTORTION**

**GREATER WELD QUALITY**
