## Warranty Commitment

### Product Warranty

You have a right to expect that the welding and cutting equipment, electrode and flux you purchase will be free of defects in workmanship and material. Standing behind the high quality of our products, Lincoln Electric's warranty commitment to its customers leads the industry in breadth and scope.

For example, our limited warranty extends to 7 Years on many of our main power rectifiers. With few exceptions, all industrial welders and power sources carry a full 3 Year Lincoln Electric warranty. Electrode, wire and flux are warranted for 1 full year, as are environmental systems.

### Extended Warranty Available

If you choose, you can extend the duration of the Lincoln Electric warranty on your Lincoln Electric industrial welder and cutting machines by two years with the Lincoln Electric Extended Warranty. Available only in the United States and Canada. Visit our web site for more information.

### Quality Systems

Choose welding suppliers wisely. Look for third party certifications on the companies and products you select. In fact, some of your projects or customers may require it. Many Lincoln Electric manufacturing sites have been inspected and registered to the world's ISO standards. Lincoln Electric was the first welding manufacturer to be registered to the tough ISO 9001 and 14001 standards.

However, there's more. Equipment destined for harsh environments are often tested to IP21, IP23 and IP23S standards. Products intended for the Canadian market meet stringent CSA (Canadian Standards Association) standards. Electrode is tested to comply with AWS (American Welding Society) and often ASME Boiler Pressure codes, ABS (American Bureau of Shipping), CWB/CSA (Canadian Welding Bureau) and MIL qualifications. Certificates of Conformance are available at our web site.

# Advanced MIG (GMAW) Processes

Your local Lincoln Electric distributor and Lincoln Electric Technical Sales Representative, backed by our Applications Engineering Department, can help you select the advanced process and equipment that can improve your results. Request a demo to see how we can help reduce costs, enhance quality or increase productivity in your operations.

PROCESS	DESCRIPTION	PRODUCT
CV	<b>Steel, Stainless &amp; Aluminum</b> » CV is the conventional mode for MIG welding. This general purpose MIG welding mode uses constant voltage for short arc, globular and spray transfer.	Power Wave® 300C, S350, R450, S500, S700 PIPEFAB™
STT®	<b>Steel, Stainless &amp; High Nickel</b> » This precision MIG mode delivers premium and consistent root pass results on pipe with low reject rates and excellent gap bridging capabilities. STT® can also be used to reduce spatter and control heat input on sheet metal applications.	Power Wave® 300C*, S350, R450, S500 all w/STT® or Advanced Module PIPEFAB™
AC-STT®	<b>Steel</b> » Based off of the patented STT® process, AC-STT® combines the proven spatter-reducing technology of the STT® waveform with the balanced heat-input characteristics of AC GMAW, producing an advanced shortcircuit process optimized specifically for thin-gauge materials.	Power Wave® 300C*, S350, R450, S500 all w/Advanced Module PIPEFAB™
Pulse	<b>Steel, Stainless, Aluminum &amp; more</b> » Traditional MIG pulse mode uses a pulse for the metal transfer, which avoids a short and allows for a wide operating range, characterized by low to high wire feed speed, many different materials and virtually no spatter.	Power Wave® 300C, S350, R450, S500, S700
Low Fume Pulse™	<b>Steel</b> » Low Fume Pulse™ simplifies the balancing act between weld-fume control and weld floor productivity. Developed to be a win-win solution, this advanced pulsed welding process maximizes arc performance while effectively controlling heat-input.	Power Wave® 300C*, R450, S500 all w/STT® or Advanced Module PIPEFAB™
Smart Pulse®	<b>Steel &amp; Stainless</b> » Enhanced MIG pulse mode that maximizes pulse welding performance and simplicity by auto-adjusting the pulse waveform based on machine settings. Set a low WFS and Smart Pulse® auto-adjusts for a narrow, focused arc. Set a high WFS, Smart Pulse auto-adjusts for a wide, soft arc.	PIPEFAB™ Power Wave 300C*
Precision Pulse™	<b>Steel &amp; Stainless</b> » This enhanced MIG pulse mode features a tight, focused arc for fast vertical up welding and outstanding out-of-position puddle control.	Power Wave® 300C, S350, R450, S500
Pulse-on-Pulse®	<b>Aluminum</b> » This arc modulation MIG pulse mode can deliver a TIG (GTAW)-like bead appearance.	Power Wave® S350, R450, S500 all w/STT® or Advanced Module
AC Precision Pulse™	<b>Aluminum</b> » With the help of the Power Wave® Advanced Module, GMAW aluminum welding results can be improved over traditional DC positive aluminum MIG welding. By switching the polarity of the arc, heat input is reduced and deposition rates are enhanced.	Power Wave® 300C*, S350, R450, S500 all w/Advanced Module
RapidArc®	<b>Steel &amp; Stainless</b> » RapidArc® is an accelerated MIG pulse mode with a short arc length compared to pulse and CV-spray for high travel speed applications.	Power Wave® 300C, S350, R450, S500, S700
Rapid X®	<b>Steel &amp; Stainless</b> » Rapid X® is a premium MIG pulse mode designed to deliver higher travels speeds and extremely low spatter levels.	Power Wave® 300C*, S350, R450, S500 all w/STT® or Advanced Module
Rapid Z®	<b>Zinc</b> » Rapid Z® is a process designed to increase stability and travel speeds, while reducing spatter and internal porosity on Zinc coated materials.	Power Wave® S350, R450, S500 all w/STT® or Advanced Module
Power Mode®	<b>Steel, Stainless &amp; Aluminum</b> » This enhanced MIG mode can deliver excellent arc stability with reduced spatter at high travels speeds, resulting from an extended short arc range at higher wire feed speed procedures. It also yields a tight and stable arc in spray transfer.	Power Wave® S350, R450, S500 all w/STT® or Advanced Module PIPEFAB™
HyperFill™	<b>Steel</b> » Patented Twin Wire GMAW process designed to increase the usable deposition rate of GMAW operations without the setup difficulty. Process uses two wires but a single power source, single wire feeder, single gun liner and single contact tip.	Power Wave® R450, S500, S700 PIPEFAB™
Synchronized Tandem MIG®	<b>Steel</b> » Synchronized Tandem MIG® overcomes deposition rate limitations of a single wire by using two wires and specific waveforms. The result is deposition rates nearly double rates possible with a single wire as well as faster travel speeds.	

Power Wave® 300C Advanced only. STT® or Advanced Module not necessary.

## Robotic Welding Wire Feeders

### The Evolution of Speed and Precision

- AutoDrive® S, steel servo torch solution with touch-retract starting technology, provides precise arc starts for a consistent bead profile and minimal post-weld clean-up
- AutoDrive® SA, push-pull servo torch solution with touch-retract start technology, initiates each robotic aluminum weld with no spatter or burnback
- Select the 4R220 for feeding larger diameter wires, or pulling through long conduits
- MAXTRAC® wire drives feature precision cast components, tool-less drive roll changes, and brass-to-brass gun connections
- Available modules relay wire feed commands from an appropriate, non-robotic Power Wave® power source to any AutoDrive® robotic wire feeder

## Magnum® PRO Water-Cooled Robotic Torches

Runs Cooler, Lasts Longer.

- Rated at 100% duty cycle at 525A with 90/10 mixed gas
- Conduction and convection cooling near the end of the torch keeps expendables cool. This expands the life of the expendables, increases the amount of arc-on time, and lowers replacement parts costs
- The gun tubes are designed with a robust inner and outer sheath that minimize damage upon crashing and improves TCP repeatability
- The unique design of the gun tubes cools both the inner and outer sheath of material. This allows the outside of the gun tubes to remain cool, which minimizes the amount of spatter that adheres to the gun tubes

## Magnum® PRO Water-Cooled External Dress Robotic Torch One-Pak®

Runs Cooler. Lasts Longer.

- Runs at 100% duty cycle at 650A with 90/10 mixed gas
- Conduction and convection cooling near the end of the torch keeps expendables cool which expands the life of the expendables, increases the amount of arc-on time, and lowers replacement parts costs
- The unique design of the gun tubes cools both the inner and outer sheath of material minimizing the amount of spatter that adheres to the gun tubes

# COLLABORATIVE ROBOTIC SYSTEMS

COOPER™ COBOTS · CLASSMATE® COBOTS · COOPER™ APP

LINCOLN®

# COLLABORATIVE WELDING

We designed the Cooper™ welding cobots to complement the skills of human welders. Cooper™ welding cobots help improve welding productivity, weld quality, and repeatability in a collaborative way. We developed the Cooper™ App for easy-to-use programming. The Power Wave® R450 robotic welding platform runs the systems with industry-leading performance. Cooper™ welding cobots make integrating automation easy for any business.

## CAN I DEMO THE COOPER™ COBOT LIVE IN ACTION? **YES**

Get in touch with our sales team to schedule a live demo near you.

# Cooper™ APP WELD PROGRAMMING

## REMOVING BARRIERS TO AUTOMATED WELDING

The Cooper™ App is exclusive to Cooper™ welding cobots from Lincoln Electric Automation, designed to make welding as simple as Click Click Weld™! The innovative Cooper™ App provides an easy and intuitive interface that gets operators performing welds quickly and allows simple adoption of personal preference and customization of specific welds.

# 1

### WELD BY NUMBERS

You don't need to be a robotics or welding expert to obtain quality welds. The Cooper™ App includes easy-to-use, pre-programmed weld parameters designed to get you started, allowing customization for advanced users to improve individual results.

# 2

### AUTO AIR MOTION RECORDING

This Lincoln Electric patented solution removes the burden from operators to program air movements and transitions between weld sequences, accelerating the time between programming and welding.

# 3

### TORCH ANGLE QUICK SET

User can set their desired work and travel angles on weld points. These angles can be automatically applied to subsequent weld points to ensure consistent welds throughout.

## NOT A WELDING EXPERT?

The Cooper™ App leverages Lincoln Electric's welding expertise by providing users with pre-made weld sets with Weld by Numbers.

# Advanced Features

Whether your fabrication requires a standard single-pass linear weld or structural steel multi-pass welds, the Cooper™ App helps provide the solution. On-screen steps guide users through the weld programming process.

## MULTI-PASS WELDING

By simply teaching the arc start and arc end location, you will define the offsets and direction of each pass. These passes can be saved to templates to be reused for other similar root welds.

## THRU-ARC™ TRACKING

The Thru-Arc™ Tracking & Touch Sense features allow operators to automatically adjust the robot's toolpath to provide accurate weld bead placement in situations where there are imperfect part geometries, misaligned parts, warped parts, or high variance part fixtures.

## WELD PATTERNING

The Weld Patterning feature helps you program the first segment of the part and then replicate the program to all the following identical segments. This saves significant programming time when working on parts with repetitive geometry.

## Generation II Air-Cooled Cooper™ Cobots

- Air-cooled systems are ideal for lower amperage applications
- Generation II includes a tabletop, easy access to equipment doors, Magnum® PRO Wire-Brake welding torches, and improved cable management bracket clamps
- The Cooper™ App makes it simple for anyone to program and create a quality weld; on-screen instructions guide users step-by-step through the process of creating welds
- Cooper™ Cobots are driven by Lincoln Electric Advanced Welding Equipment - including the Power Wave® R450 and AutoDrive® Robotic Wire feeder - delivering industry-leading innovation for superior weld performance and productivity

## Ambient Air Solutions

### Filtered Shop Air is Easier Than You Think!

- Free-standing, wall-mountable, or hanging general filtration system for weld fume control; ideal for manufacturing and fabrication facilities, and offers an economical alternative to a push/pull system
- Intended to supplement an existing source extraction system as well as natural draft/forced ventilation to reduce overall concentration of welding fume, dust and dirt in operator areas
- Green Drive™ control system reduces energy costs and increases filter life by continually monitoring operation and automatically adjusting airflow to maintain optimal performance levels
- Automatic Filter Cleaning System. Each time the system is switched off, an automatic cleaning cycle takes place. During this cycle the filter cartridges are cleaned by blasts of compressed air. The dislodged particulate is deposited in the drum beneath the filter

## Prism® Thermal Suppression

### Prevention, Detection, Suppression

- Keep your system running at peak performance and help mitigate thermal events by adding some or all of Lincoln Electric's thermal event solutions to your Prism® System
- Prism® Thermal Suppression can mitigate the risk of thermal events caused by welding and cutting particulate entering the fume extraction unit. This fully integrated fire suppression system is UL-listed, FM-approved and a recommended option by Lincoln Electric
- The Oil Guardian™ can be added to a system to continuously inject limestone powder into the fume control system ductwork which helps to absorb the vaporized oil generated when welding oily parts. The resulting dry matter is blown off the filters during the cleaning cycle
- Spark traps can be placed in the duct to help to prevent sparks from reaching the extraction unit, helping to prevent thermal events

### Arc Welding Fumes and Gases

The **fume plume** contains solid particles from the consumables, base metal, and base metal coating. For common mild steel arc welding, depending on the amount and length of exposure to these fumes, most immediate or short term effects are temporary, and include symptoms of burning eyes and skin, dizziness, nausea, and fever. Long-term exposure to welding fumes can lead to siderosis (iron deposits in the lungs) and may affect pulmonary function. Bronchitis and some lung fibrosis have been reported.

Some compounds which may be in welding fume, and reported health effects of overexposure are below. See the SDS for the consumable product used for specific information.

- Barium** may cause severe stomach pain, slow pulse rate; irregular heartbeat, ringing of the ears, convulsion and muscle spasms. In extreme cases can cause death.
- Cadmium** fumes can be fatal even under brief overexposures, with symptoms much like metal fume fever.
- Chromium** and its compounds are on the IARC (International Agency for Research on Cancer) and NTP (National Toxicology Program) lists as posing a cancer risk to humans. Some forms of these metals are known or suspected to cause lung cancer in processes other than welding and asthma has been reported.
- Manganese:** Manganese overexposure may affect the central nervous system, resulting in poor coordination, difficulty in speaking, and tremor of arms or legs. This condition is considered irreversible.
- Nickel:** Nickel and its compounds are on the IARC (International Agency for Research on Cancer) and NTP (National Toxicology Program) lists as posing a cancer risk to humans.
- Silica:** Overexposure can cause severe lung damage (silicosis). Crystalline silica is present in submerged arc flux.
- Zinc:** Overexposure to zinc may cause metal fume fever with symptoms similar to the common flu.

Your work area has adequate ventilation when there is enough ventilation and/or exhaust to control worker exposure to hazardous materials in the welding fumes and gases so the applicable limits for those materials is not exceeded. See the SDS for the legal limits, the OSHA PEL (Permissible Exposure Limit), and the recommended guideline, the ACGIH TLV (Threshold Limit Value). Confirm the worker's exposure does not exceed the applicable exposure limit for compounds in the fumes and gases by having an industrial hygienist take and analyze a sample of the breathing air. A respirator may be required if exposure cannot be controlled to the PEL or TLV.

Read the product label and Material Safety Data sheet for the electrode posted in the work place or in the electrode or flux container to see what fumes can be reasonably expected from use of the product and to determine if special ventilation is needed. Know what the base metal is and determine if there is any paint, plating, or coating that could expose you to toxic fumes and/or gases. Remove it from the metal being welded, if possible.

If you start to feel uncomfortable, dizzy or nauseous, you may be overexposed to fumes and gases, or suffering from oxygen deficiency. Stop welding and get some fresh air immediately. Notify your supervisor and co-workers so the situation can be corrected and other workers can avoid the hazard. Be sure you are following these safe practices, the consumable labeling and SDS and improve the ventilation in your area. Do not continue welding until the situation has been corrected.
