Warranty Commitment

3 Year Warranty

You have a right to expect that the welding and cutting equipment, electrode and flux you purchase will be free of defects in workmanship and material. Standing behind the high quality of our products, Lincoln Electric's warranty commitment to its customers leads the industry in breadth and scope.

For example, our limited warranty extends to 7 Years on many of our main power rectifiers. With few exceptions, all industrial welders and power sources carry a full 3 Year Lincoln Electric warranty. Electrode, wire and flux are warranted for 1 full year, as are environmental systems.

Extended Warranty Available

If you choose, you can extend the duration of the Lincoln Electric warranty on your Lincoln Electric industrial welder and cutting machines by two years with the Lincoln Electric Extended Warranty. Available only in the United States and Canada. Visit our web site for more information.

Quality Systems

Choose welding suppliers wisely . . . look for third party certifications on the companies and products you select. In fact, some of your projects or customers may require it. Many Lincoln Electric manufacturing sites have been inspected and registered to the world's ISO standards. In fact, Lincoln Electric was the first welding manufacturer to be registered to the tough ISO 9001 and 14001 standards.

However, there's more. Equipment destined for harsh environments is often tested to IP21, IP23 and IP23S standards. Products intended for the Canadian market meet stringent CSA (Canadian Standards Association) standards. Electrode is tested to comply with AWS (American Welding Society) and often ASME Boiler Pressure codes, ABS (American Bureau of Shipping), CWB/CSA (Canadian Welding Bureau) and MIL qualifications. Certificates of Conformance are available at our web site.

CUSTOMER ASSISTANCE POLICY

The business of The Lincoln Electric Company is manufacturing and selling high quality welding equipment, consumables, and cutting equipment. Our challenge is to meet the needs of our customers and to exceed their expectations. On occasion, purchasers may ask Lincoln Electric for information or advice about their use of our products. Our employees respond to inquiries to the best of their ability based on information provided to them by the customers and the knowledge they may have concerning the application. Our employees, however, are not in a position to verify the information provided or to evaluate the engineering requirements for the particular weldment. Accordingly, Lincoln Electric does not warrant or guarantee or assume any liability with respect to such information or advice. Moreover, the provision of such information or advice does not create, expand, or alter any warranty on our products. Any express or implied warranty that might arise from the information or advice, including any implied warranty of merchantability or any warranty of fitness for any customers' particular purpose is specifically disclaimed.

Lincoln Electric is a responsive manufacturer, but the selection and use of specific products sold by Lincoln Electric is solely within the control of, and remains the sole responsibility of the customer. Many variables beyond the control of Lincoln Electric affect the results obtained in applying these types of fabrication methods and service requirements.

Aspect® 230

The Consistency You Want, The Performance You Need

- Exceptional Arc Response and Stability
- Maximize productivity and spend more time welding with a rated 35% duty cycle at 230 amps
- Advanced aluminum controls, AC Auto Balance technology, pulse, frequency, and additional waveforms
- Portable, lightweight and easy to transport
- IP23 rated for harsh environments

Precision TIG® 275

A TIG Welding Workhorse

- AC Auto-Balance® automatically adjusts for the optimal mix of cleaning and penetration when welding aluminum. Or, take full control to adjust cleaning or penetration.
- Delivers the widest output range in its class from 2-340 amps
- Upgrade with the optional Advanced Pulse Control panel to enable better control over heat input, resulting in less distortion on thin metals
- Experience enhanced starting, optimal arc stability, and precise crater fills with Micro-Start™ II technology

Advanced TIG Technology Made Simple

- Effortless arc control for the smoothest welds
- AC Auto-Balance® makes it simple by automatically providing the optimal mix of cleaning and penetration on aluminum
- Activate Intellistart™ to provide for soft starts on thin materials for minimal distortion and hotter starts on thick materials
- Customize when you need it: Manage AC frequency, balance and offset to modify arc profile, cleaning action or penetration

Arc Tracker®

Monitor Weld and Operator Performance

- Advanced digital controls sample the welding arc at extremely high speeds
- Simple plug-and-play design enables you to connect to any DC welding circuit, attach voltage leads and immediately monitor arc performance
- Easily calibrated for use in factory quality systems
- CheckPoint™ – A cloud-based system to view or analyze your welding data. Track equipment usage, store weld data, configure fault limits and more
- Weld Data Monitoring – Compatible with CheckPoint™, this tool provides the ability to view and analyze your welding data, track equipment usage, store weld data, configure fault limits and more.

Processes

- DC Arc Welding Circuits Only (10-1000A @ 100% Duty Cycle)
- Any DC Polarity Welding Process
- Any DC Welding Power Source

Request a demo to see how we can help reduce costs, enhance quality or increase productivity in your operations.

PROCESS	DESCRIPTION	PRODUCT
CV	Steel, Stainless & Aluminum » CV is the conventional mode for MIG welding. This general purpose MIG welding mode uses constant voltage for short arc, globular and spray transfer.	Power Wave® 300C, S350, R450, S500, S700 PIPEFAB™
STT®	Steel, Stainless & High Nickel » This precision MIG mode delivers premium and consistent root pass results on pipe with low reject rates and excellent gap bridging capabilities. STT® can also be used to reduce spatter and control heat input on sheet metal applications.	Power Wave® 300C*, S350, R450, S500 all w/STT® or Advanced Module PIPEFAB™
AC-STT®	Steel » Based off of the patented STT® process, AC-STT® combines the proven spatter-reducing technology of the STT® waveform with the balanced heat-input characteristics of AC GMAW, producing an advanced shortcircuit process optimized specifically for thin-gauge materials.	Power Wave® 300C*, S350, R450, S500 all w/Advanced Module PIPEFAB™
Pulse	Steel, Stainless, Aluminum & more » Traditional MIG pulse mode uses a pulse for the metal transfer, which avoids a short and allows for a wide operating range, characterized by low to high wire feed speed, many different materials and virtually no spatter.	Power Wave® 300C, S350, R450, S500, S700
Low Fume Pulse™	Steel » Low Fume Pulse™ simplifies the balancing act between weld-fume control and weld floor productivity. Developed to be a win-win solution, this advanced pulsed welding process maximizes arc performance while effectively controlling heat-input.	Power Wave® 300C*, R450, S500 all w/STT® or Advanced Module PIPEFAB™
Smart Pulse™	Steel & Stainless » Enhanced MIG pulse mode that maximizes pulse welding performance and simplicity by auto-adjusting the pulse waveform based on machine settings. Set a low WFS and Smart Pulse™ auto-adjusts for a narrow, focused arc. Set a high WFS, Smart Pulse auto-adjusts for a wide, soft arc.	PIPEFAB™ Power Wave 300C*
Precision Pulse™	Steel & Stainless » This enhanced MIG pulse mode features a tight, focused arc for fast vertical up welding and outstanding out-of-position puddle control.	Power Wave® 300C, S350, R450, S500
Pulse-on-Pulse®	Aluminum » This arc modulation MIG pulse mode can deliver a TIG (GTAW)-like bead appearance.	Power Wave S350, R450, S500 all w/ STT or Advanced Module
AC Precision Pulse™	Aluminum » With the help of the Power Wave® Advanced Module, GMAW aluminum welding results can be improved over traditional DC positive aluminum MIG welding. By switching the polarity of the arc, heat input is reduced and deposition rates are enhanced.	Power Wave® 300C*, S350, R450, S500 all w/Advanced Module
RapidArc®	Steel & Stainless » RapidArc® is an accelerated MIG pulse mode with a short arc length compared to pulse and CV-spray for high travel speed applications.	Power Wave® 300C, S350, R450, S500, S700
Rapid X™	Steel & Stainless » Rapid X™ is a premium MIG pulse mode designed to deliver higher travels speeds and extremely low spatter levels.	Power Wave® 300C*, S350, R450, S500 all w/STT® or Advanced Module
Rapid Z™	Zinc » Rapid Z™ is a process designed to increase stability and travel speeds, while reducing spatter and internal porosity on Zinc coated materials.	Power Wave® S350, R450, S500 all w/STT® or Advanced Module
Power Mode®	Steel, Stainless & Aluminum » This enhanced MIG mode can deliver excellent arc stability with reduced spatter at high travels speeds, resulting from an extended short arc range at higher wire feed speed procedures. It also yields a tight and stable arc in spray transfer.	Power Wave® S350, R450, S500 all w/STT® or Advanced Module PIPEFAB™
HyperFill™	Steel » Patented Twin Wire GMAW process designed to increase the usable deposition rate of GMAW operations without the setup difficulty. Process uses two wires but a single power source, single wire feeder, single gun liner and single contact tip.	Power Wave® R450, S500, S700 PIPEFAB™
Synchronized Tandem MIG®	Steel » Synchronized Tandem MIG® overcomes deposition rate limitations of a single wire by using two wires and specific waveforms. The result is deposition rates nearly double rates possible with a single wire as well as faster travel speeds.	

* Power Wave 300C Advanced only. STT or Advanced Module not necessary.

WELD SEQUENCER™

PROCESS CONTROL SOLUTIONS

Process Control Step-by-Step

Digitally enhance your weld instructions

- Easy-to-follow graphic interface clearly guides operators through each step of the assembly process, simplifying complex work instructions.
- Automatic, step-by-step weld sequencing clearly defines the assembly of each part and placement of each weld, reducing possible quality errors.

Easily verify your performance and quality

- On-screen verification provides instant operator feedback, ensuring all welds are present and within operating ranges prior to the assembly leaving the weld cell.
- Weld Sequencer automatically syncs with Lincoln Electric's CheckPoint® Production Monitoring solution for real-time production data anywhere in the world, at any time.

Maximum Performance Weld-to-Weld

Optimize your settings for each weld

- Advanced programming provides complete power source control, automatically dialing in the right procedure and parameters for each weld with zero operator interaction – delivering maximum productivity without compromising quality.

Fast, Simple, Intuitive Sequence Creation

1. Build a database of all your weld procedures and welding validations
2. Drag and drop functional blocks for simple programming
3. Intuitive ladder logic flow-chart type sequencing

Simple, Intuitive, Powerful Operator Interface

1. Track part cycle time and performance part to part
2. Real-time parameter feedback for the operator and quality control
3. Navigate the sequence simply by clicking the trigger on ANY welding torch
4. Complete visibility to background settings (like Spot Timer or Pre-flow)

CHECKPOINT®

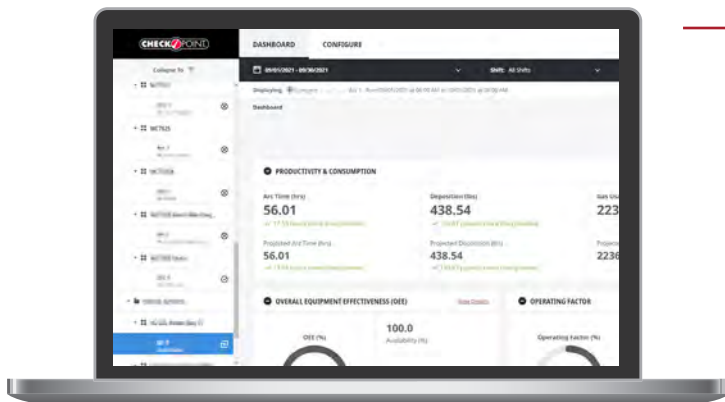

INFORMATION THAT LEADS TO SOLUTIONS

Information that Leads to Solutions™

CheckPoint® technology changes the way you look at your welding operations. More than just a data collection tool, CheckPoint® is a full production monitoring solution that delivers the precise information you need for maximizing welding productivity and performance

CheckPoint® allows you to:

- Identify the True Cost of Welding
- Evaluate the True Quality of Welding
- Deliver to True Performance of Welding

Powerful Data, Quick and Easy

CheckPoint provides full visibility of your welding operation faster, cleaner and more efficiently. From real-time dashboard snapshots to in-depth weld analytics, CheckPoint's framework is built to provide essential welding data the way you need it for whatever your role may be.

- Operator arc on time
- Weld and assembly information
- OEE metrics
- Information tailored to functional areas
- Material consumption

Secure Access – Anywhere, Any Device

CheckPoint's secure, cloud-based access allows key stakeholders to view and track welding operations anywhere in the world, on any device.

- No setup or software installation required
- Track real-time weld production data 24/7
- Create custom alerts and notifications

Ranger® 305 G EFI

Fuel-Efficient Engine-Driven Welder/Generator

- Choose the Ranger 305 G EFI (electronic fuel injection) for easier starts in cold weather and lower fuel consumption
- Electric fuel pump helps avoid vapor lock during high-altitude operation
- Excellent DC multi-process welding up to 305 amps
- Equipped with digital weld meters to accurately monitor welding output
- 12 gallon [45 L] tank for extended run times
- 9,500 watts of continuous AC generator power

Processes

- Stick
- TIG
- MIG
- Flux-Cored
- Gouging

Ranger® 330MPX™

Smaller. Smarter. Quieter. More Powerful.

- 330 Amps of DC welding output to tackle any job
- Compact size for easy jobsite maneuverability
- Easy-to-Use digital user interface with advanced welding technology
- Low decibel rating for operator comfort and safety
- 10,000 watts of clean continuous AC generator power

Classic® 300 HE

Fuel Efficiency in Pipeline and Construction Welding

- Traditional pipeline welding machine with CC output for stick, tig, and arc gouging applications
- Five current ranges with overlap for stick welding and other processes where slope control is desired. Fine tuning within each range
- All-copper windings enhance arc stability for a smooth, high performance arc
- Industry proven Kubota® D1503 diesel engine
- CV Module available to add wire welding capability

Activ8X® with CrossLinc® Technology and TVT™

Rugged. Compact. Connected.

- Impact resistant, flame retardant case and potted PC Boards provide rugged durability for tough conditions
- MAXTRAC® Wire Drive System – Heavy-duty cast aluminum wire drive system provides reliable feeding and durability
- Accepts up to 8 in. (203 mm) diameter wire spools
- Features CrossLinc® Technology to help improve jobsite safety, quality and productivity
- True Voltage Technology™ (TVT™) automatically compensates for voltage drops across long welding cables

Processes

- MIG
- Flux-Cored

Tough. Proven. Reliable.

- Equipped with trigger interlock circuit to reduce operator fatigue
- Gun-mounted two-position switch allows on-the-fly change to 83% of the preset wire feed speed
- Completely enclosed wire reel keeps the wire free of contaminants
- Ideal for self-shielded flux-cored welding on pipelines and other extreme worksites

Full Control. Fewer Cables.

- Reduce job site clutter and eliminate unnecessary movement of personnel around the site
- Full voltage control at the feeder results in the correct settings for every weld and allows the operator to accurately compensate for voltage drop across long cable runs
- Set up faster and eliminate trips to the power source to make adjustments
- Fully encapsulated and environmentally protected electronics

Power Feed® 84 Dual

Advanced Multi-Process Digital Control

- Includes 16 user memories for complete WPS recall and a USB port to transfer memory data
- Dual feed head configuration provides convenient switching between wire types & sizes.
- Advanced interface includes Auto-Settings to simplify process set up
- ArcLink® digital communications protocol enables fast, advanced communication with any ArcLink®-enabled welding power source

Processes

- MIG
- Pulsed MIG
- MIG-STT®
- Flux-Cored
- Stick
- TIG
- Gouging (CCAG)

LT-7 Tractor

Track Greater Submerged Arc Productivity

- Calibrated tractor drive travels 6 to 70 ipm (12.7-127.0 m/min)
- Vertical head lift adjuster for adjusting electrical stick-out from 1/2 to 5 inches
- Control box can be mounted on either left or right, eliminating the need to return to the power source for routine procedure changes
- Welds horizontal fillets, lap and butt joints to the left or right side of the tractor frame for convenience

Flextec® 650X

Multi-Process Power for Heavy Duty Applications

- Supports the CV-Subarc process for both 42V and 115V submerged arc feeders
- Compatible with most Lincoln Electric feeders including portable across-the-arc, CrossLinc®, ArcLink® and common bench or boom models
- Engineered for outdoor use and harsh environments (IP23 rated)
- Substantial gouging capability with up to a 1/2 in. (12.7 mm) carbon

Idealarc® DC1000

Rugged Constructon. Simple Controls.

- Full range output control provides easy operation and precise arc control
- Terminal strip and output studs accommodate remote connections and cable
- Low profile case allows installation of a workbench and for stacking up to two machines to conserve floor space
- Internal components are coated to protect against moisture and corrosion; removable side panels allow easy access to internal parts
- Seven-year warranty on power rectifier

SEE AND BE SEEN.

Lincoln Electric 4C[®] Lens Technology lets you see the puddle like never before.

The proprietary liquid crystal display (LCD) has a perfect optical rating and alters the visible color spectrum of the lens.

This provides the user an unparalleled view of the arc, puddle and base material while reducing eye strain.

Magnum® PRO Curve™ HDE™ Series

Heavy Duty. Ergonomic.

- The Magnum® PRO Curve™ HDE™ guns have the highest duty cycle rating in their class, making them ideal for rugged environments and high heat applications.
- Lincoln Electric's long-lasting Magnum® PRO expendables have extended service life, reducing downtime and total costs.
- The bolt of the gun tube can be loosened without the need for tools and rotated 360°, so it is easy to position into a comfortable spot for welding.
- The soft rubber over molding enhances comfort and allows for an easier grip of the gun.

Heavy Duty. Ergonomic.

- 100% Duty Cycle with Mixed Gas – The Magnum® PRO Barrel HDE™ guns have the highest duty cycle rating in their class, making them ideal for rugged environments and high heat applications
- Premium Expendable Performance – Lincoln Electric's patented Magnum® PRO expendables are designed with both performance and productivity in mind. The premium performance helps extend the service life of the expendables, reducing downtime and total costs
- Tool-less Rotatable Gun Tube – The bolt of the gun tube can be loosened without the need for tools and rotated 360°, so it is easy to position into a comfortable spot for welding

Magnum® PRO Water-Cooled Guns

Improving Comfort and Performance

- The 400A and 500A guns run at 100% duty cycle using 90/10 mixed gas, making them ideal for high heat applications.
- The large diameter and mass of the Magnum® PRO Copper Plus™ contact tips help disperse heat and keep the tips cooler, expanding their life.
- The 500A water-cooled gooseneck design keeps the nozzle cool in high-heat applications.
- The soft rubber over molding enhances comfort and allows for an easier grip of the gun.

Magnum® PRO Robotic Guns

Designed For Long Life.

Hexagon-Shaped Connector Design Ensures Better Electrical Conductivity and Prevents Micro-Arcing:

- Cables exceed industry standards by a factor of two in durability
- Utilizes Magnum® PRO expendables that increase the amount of arc-on time
- Extended Life™ contact tips are designed with a chrome zirconium alloy to prevent annealing and wear
- Gun tube to diffuser interface design helps withstand more accidental crashes than traditional gun tubes
- Changing between 350A and 550A expendables does not alter the robot TCP, and parts are interchangeable between all gun models

Magnum® PRO Water-Cooled Robotic Torches

Runs Cooler, Lasts Longer.

- Compared to traditional air-cooled torches, the Magnum® PRO Water-Cooled Robotic Torch can run at 100% duty cycle at 525A with 90/10 mixed gas.
- Conduction and convection cooling near the end of the torch keeps expendables cool. This expands the life of the expendables, increases the amount of arc-on time, and lowers replacement parts costs.
- The gun tubes are designed with a robust inner and outer sheath that minimize damage upon crashing and improve TCP repeatability.
- The unique design of the gun tubes cools both the inner and outer sheath of material. This allows the outside of the gun tubes to remain cool, which minimizes the amount of spatter that adheres to the gun tubes.

Magnum® PRO AL Pistol Grip Push-Pull Guns

A Lightweight Gun for Heavy-Duty Aluminum Work

- Superior push-pull wire feeding technology – Reduces friction in the wire feed path, resulting in smooth feeding and minimizing damage to the wire
- Quick-Change Liner – Simply remove the liner nut to easily access the liner
- Magnum® PRO expendables – Utilizes common expendables with all Magnum® PRO MIG Guns. 550A expendables are standard with the Magnum® PRO AL.
- Lightweight, ergonomic handle – Intended for heavy duty work but light in weight with a well-balanced pistol grip to fit in either hand.
- Recessed adjustment dial – Conveniently located at the rear of the handle to prevent a change while welding.
- Removable drive roll cover – Easy access to wire and drive rolls.

Plasma Cutting with Built-In Air

- Rated for up to 3/8 in. (9.5 mm) max cuts
- Internal air compressor enables operation in environments where external compressed air is not available
- Extremely portable at only 40 lbs. (18 kg)
- Touch Start™ system delivers reliable plasma arc initiation without high frequency
- Front panel purge control makes it easy to set the air flow rate without initiating the plasma arc

Vernon Tool® MPM®

Automated Pipe Profiling and Cutting for Industrial Applications

- Ideal for process and power piping, mechanical and HVAC contracting, shipbuilding, offshore, structural pipe trusses and pressure vessel fabrication
- Servo-driven systems convey pipe from raw material storage racks to the cutting head, allowing our cutting process to precisely profile the pipe and convey the finished pieces to a separate rack for offloading
- Reusable part-cutting programs are created at the machine, or from a remote PC
- Unlike chucking machines, the MPM fully supports the pipe and its remnant offering safe, simple operation and more efficient material handling

PythonX® SPG

STRUCTURAL | PIPE | GRATING

Robotic CNC Plasma Cutting System for Structural Steel Fabrication

- Space-saving robotic beam line that will process structural sections of all shapes and sizes
- Optional pipe and bar grating cutting capabilities
- Feed system can be reversed if the system needs to be moved
- Processes I-beams, H-beams, tubing, angle, channel, flat bar, or bulb flats
- Highly productive coping, beveling, and marking
- Simple to operate
- FullCircle™ robotic CNC software provides a feature-rich, easy to use suite to control each aspect of production

What's Included

Base Model/Unit Includes » Some base models include a set of specific standard accessories

One-Pak® Packages » Assembly required

Ready-Pak® Packages » Fully assembled

Tomahawk® 375 Air

Base Model (K2806-1)

- Internal air compressor (external air connection also standard)
- LC25 Torch with 10 ft. (3.0 m) cable
- Air regulator and pressure gauge
- Internal water separator
- Work clamp and cable
- Spare consumables
- Shoulder strap
- Input power cord

Tomahawk® 625

Base Model (K2807-1)

- LC40 Hand Torch, 20 ft. (6.0 m) cable
- Air regulator and pressure gauge
- Internal water separator
- Work clamp and cable
- Spare consumables
- Shoulder strap
- Input power cord

Tomahawk® 1000

Base Model (K2808-1)

- LC65 Hand Torch with 25 ft. (7.6 m) cable
- Air regulator and pressure gauge
- Internal water separator
- Work clamp and cable
- Spare consumables
- Input power cord

Tomahawk® 1500

Base Model (K2809-1)

- Work Clamp and Cable
- Air Regulator and Pressure Gage
- Input Power Cord

25 ft. (7.6 m) Hand Torch One-Pak® Package (K3477-1)

- Everything listed for base model (K2809-1)
- LC105 Hand Torch 25 ft. (7.6 m) (K2849-1)
- Consumable starter kit

50 ft. (15.2 m) Hand Torch One-Pak® Package (K3477-2)

- Everything listed for base model (K2809-1)
- LC105 Hand Torch 50 ft. (15.2 m) cable
- Consumable starter kit

Torchmate® 4400 | 4800 | 4510

Includes

- Fully assembled dual-tool CNC plasma cutting table with full 4x4, 4x8 or 5x10 tool reach
- FlexCut® 80 plasma cutter
- Water table fume extraction
- Arc-voltage digital height control
- Industrial touch screen HMI
- Pre-installed Torchmate CAD/CAM design software
- Consumable starter kit
- Input power cord

FlexCut® 80

Base Model (K4809-1)

- Air regulator and pressure gauge
- Internal water separator
- Work clamp and cable
- Input power cord

FlexCut® 125

Base Model (K4811-1)

- Air regulator and pressure gauge
- Internal water separator
- Work clamp and cable
- Input power cord

Bulk Package Hoods and Accessories for Drums and Boxes

Coverage for Consumables

- Tough polyethylene construction for long shop life
- Dual windows for easy operator access
- Available for round, square and octagon-shaped packages

Processes

- MIG
- Flux-Cored

Drum and Box Covers

Bulk Package Protection

- Tough, fire-resistant PVC construction
- Provides effective protection of fiber or cardboard drums located near the weld cell
- Available for round, square and octagon-shaped bulk wire packages

Processes

- MIG
- Flux-Cored

Drum, Reel and Box Handling Equipment

Packages on the Move

- Dollies available for drum or boxes with up to 1000 lb. (453 kg) capacity
- Staging carts available for drums or reels with up to 1000 lb. (453 kg) capacity
- Variety of lifters for chimeless and chimed drums

Processes

- MIG
- Flux-cored

Weld Wire Conduit

Wire Delivery at any Length

- Choose from polymer or extra flexible material
- Available in pre-cut lengths up to 30 ft. (9.1 m) or in bulk
- Self-threading or compression style connectors available

Processes

- MIG
- Flux-cored
- Submerged Arc

Conduit Connectors

Make the Welding Connection

- Variety of types and sizes available
- Rounded internal shoulders for smooth wire feeding
- Union kits and bulkhead connector

Processes

- MIG
- Flux-cored
- Submerged Arc

Conduit Hangers, Clamps and Sleeves

Wire Support

- Hanger prevents excessive sag in conduit to existing structures
- Sleeves protect conduit from operating environment
- Use clamps to secure conduit to existing structures

Processes

- MIG
- Flux-cored
- Submerged Arc

Wire Feed Assist

Extra Drive for Your Wire Feed

- Reduces pulling force required from feed motor
- Enables longer conduit runs
- Adjustable torque setting prevents bird nesting
- For 0.035-1/8 in. (0.9-3.2 mm) wire diameters

Processes

- MIG
- Flux-Cored

Input

Compressed Shop Air

Wire Straighteners

Get It Straight

- Straighten or recast all types of wires
- Lightweight, yet rugged
- Equipped with locating calibration on face of unit and fine adjustment scale on tension knob

Processes

- MIG
- Flux-cored
- Submerged Arc

Dispensing Equipment for Bulk Reels

The Reel Deal

- Universal base plate design fits wood or plastic reels with 1-5/16 in. (33 mm) or 5 in. (127 mm) center arbors
- Twin locking cams secure base plate to reel for stability
- Smooth acceleration and deceleration of feed arm

Processes

- MIG
- Flux-Cored

Infinity-Pak® Dispensing System

Continuous Wire, Continuous Welding

- Butt welding and flash removal process take only seconds
- Configurations for every environment, including 2-station, 4-station and wall mount
- ASTM certified and the bulk package is 100% recyclable
- Use with a variety of Lincoln Electric SuperArc® wire alloys

Wire Level Gauge

Keep an Eye on Wire Supply

- Detects level of wire remaining in the drum or box
- Wire level displayed visually with color and percentage scale
- Useable with 500 lb. (227 kg) or 1000 lb. (453 kg) package

Processes

- MIG
- Flux-Cored

Wire Delivery Accessories

Additional Tools

- Draw gauge accurately measures the draw weight of welding wire pulling through conduit in English or metric at the touch of a button
- Nozzle cleaning tool removes spatter; choice of five sizes
- Conduit cutter trims all diameters of polymer conduit with ease

Processes

- MIG
- Flux-cored
- Submerged Arc

Cutting

Lincoln Electric's cutting systems produce superior cuts at lower operating costs. The range of solutions, including plasma cutters and oxy fuel systems, cut any shape, including flat plate, tube and pipe, and structural. Our cutting systems are used in numerous industries and by home hobbyists and in a variety of applications.

Stamping and Metal Forming

Lincoln Electric has an extensive depth of experience in stamping and metal forming, integrating and supporting all brands of equipment. We offer servo transfer systems of various sizes and configurations, blank stacking and de-stacking solutions for pre- and post-press applications, press-to-press automation, and robotic solutions.

Tooling

Complete in-house designs of machining and fabricating systems are available. Our turnkey systems come with full robot programming and can be integrated into your processes. The broad product offering is used for automotive components, heavy equipment and general fabrication, and in the manufacture of large components.

Positioning Equipment

We custom-design a variety of positioners, conveyors and gantry systems for many applications. Our deep understanding of kinematics helps us develop a total solution for manufacturing and fabricating operations. Our post-installation support delivers optimal service.

Mechanized Welding

We provide turnkey mechanized automation solutions for submerged arc and open arc welding. Whether you are looking for a single arc or multiple arc system, our experts can develop a solution that meets your application needs. Examples of our mechanized solutions include:

- Systems and Manipulators
- Gantries
- Sidebeams
- Seamers
- Tilt Rotate Positioners
- Turning and idle rolls
- Seam Tracker Systems
- Accessories

Portable Mechanized & Orbital Welding

The APEX® platform of mechanized welding systems is built around portability and flexibility across a wide range of applications. Each pre-configured Ready-Pak® is ready to weld in the harshest environments from field construction to offshore fabrication.

- Transitioning from GMAW/FCAW to GTAW is possible with minimal changeover.
- Interchangeable HELIX® weld heads are available for compact or low profile track based welding and clamp-on small bore pipe and tube.
- HELIX® Tracks are available for flat plate, orbital OD and ID pipe welding.
- A full color pendant based user interface puts the operator in full command while offering industry leading welding performance and intelligent process control.

Robotic Welding

With in-depth knowledge of all welding process and applications, Lincoln Electric has engineered and installed thousands of robotic welding systems. These robotic welding solutions allow manufactures to weld simple to complex parts with a high degree of repeatability and efficiency.

- Fab-Mate®, Fab-Pak® and Pro-Pak® robotic welding systems have pre-established critical dimensions and are available in a variety of configurations.
- Custom systems are uniquely designed and fully automated for virtually any welding process or application.

Laser Welding

We have a unique understanding on a range of laser processes, including laser cutting, autogenous laser welding, hybrid laser arc welding, laser hot wire cladding, and laser brazing. We have deep relationships with the expert resources in laser manufacturing, optics component assembly and research laboratories.

System Integration

Lincoln Electric is your single point of contact for system design development. Our dedicated project managers will deliver a comprehensive turnkey system thanks to experienced designers, programmers and technicians, as well as extensive manufacturing capabilities. Our in-house engineering and development teams provide process development, tool and controls design, simulation services, and PLC and robot system programming. We ensure success by understanding the customer's facility and requirements, managing changes and becoming an extension of the customer's launch team.

Environmental Solutions

Welding is a safe occupation when sufficient measures are taken to protect fabricators from potential hazards. We offer a range of stand-alone and facility solutions to achieve this goal, including:

- Portable and stationary fume extraction units
- Extraction arms and hoods
- Downdraft tables
- Engineered control systems
- Full line of thermal suppression products
- Fume guns

We can integrate our environmental solutions with other automation products.

Automated Grinding

We provide pre-engineered solutions for pre- and post-weld prep applications. Built to streamline manufacturing processes these cells have everything you need to obtain higher quality, safety and consistency in your grinding processes.

Collaborative Welding Robot

Lincoln Electric offers a collaborative welding robot (cobot) that allows operators to safely work alongside the system without the need for traditional fencing. Cobots are ideal for high-mix, low volume applications and offer the consistency and flexibility that you need without compromising the quality.

ZEMAN solutions for Structural Steel Fabricators

SPS - Scanning & Sorting

This smart scanning system enables structural steel fabricators to manage plates by identifying dimensions, shapes and other characteristics. Workpieces are robotically sorted into designated boxes according to specific criteria. The RFID tag in each box monitors the location and position of each plate throughout the production process so that workpieces can be tracked via any device connected to the system.

SBA - Structural Assembly

The ideal machine for accurate and efficient processing of steel workpieces in large quantities. The torch-mounted laser measurement enables the tacking and welding robot to identify workpiece dimensions for optimal positioning. The handling robot scans the ADD parts, then switches to the magnetic attachment to place the parts on all four sides of the profile. Workflow is auto-generated by proFIT® software, which is compatible with all common 3D software systems. The fitting process speed – accurate to within 1/24 inch (1 mm) over a 60-foot (18 m) profile – paired with the simple loading/unloading process, frees up manual fitters and welders to handle more complex work. No more pulling tape. No more drawing chalk lines. Just load the material and go.

SBW - Structural Welding

Our robotic cells are designed to weld both manual- and robotic-fitted structural steel beams, and are available with up to two welding robots. The system is also available in a duplex machine configuration. The patented proFIT® software auto-generates production data within minutes, and can accommodate non-perfect parts and assemblies. The system allows continuous optimal fillet and groove welds (single-layer and multilayer) with up to 13 evenly staggered passes.

Robotic Welding Power Sources

Power Wave® Welding Power Sources Specifically Designed For Robotic Systems

- Built-in wire feeder control
- ArcLink® communication protocol communicates with robotic arm controller
- Standard suite of software solutions, including CheckPoint™ and Power Wave® Manager
- High-performance pulse wave forms, including RapidArc®, Precision Pulse™, Pulse-on-Pulse™ and others
- Flexibility to add or connect modules, fume control, water coolers, computers or other accessories

Robotic Welding Wire Feeders

Optimized for Robotics, Extremely Compact and Lightweight

- AutoDrive® S, steel servo torch solution with touch-retract starting technology, provides precise arc starts for a consistent bead profile and minimal post-weld clean-up
- AutoDrive® SA, push-pull servo torch solution with touch-retract start technology, initiates each robotic aluminum weld with no spatter or burnback
- Select the 4R220 for feeding larger diameter wires, or pulling through long conduits
- MAXTRAC® wire drives feature precision cast components, tool-less drive roll changes, and brass-to-brass gun connections
- Available modules relay wire feed commands from an appropriate, non-robotic Power Wave® power source to any AutoDrive® robotic wire feeder

Prism® Down Draft

All in One Workbench and Extraction System

- Prism® Down Draft models feature strong back and down draft extraction capacity, 3 stage spark arrestor and sizable 560 ft² (52 m²) of filter media
- Automatic Filter Cleaning: The on-board Mechanized Cleaning model uses blasts of compressed air (external resource) to knock particulate from the filter surfaces, extending the time interval between filter replacements.
- The Prism® Down Draft Direct model is designed for fabricators that prefer to add their own extraction system to the downdraft table

Prism® Exhaust Hoods

Simple. Flexible. Cost Effective.

- Manage your automation welding & cutting fume extraction with cost-effective simplicity.
- Capture fume without sacrificing quality and efficiency.
- With its modular design and extensive range of standard sizes, customize a Prism® Exhaust Hood to fit your exact automation cell dimensions.
- Maximize your fume management strategy by pairing your hood with a Prism® or Prism® Compact system.

Prism® Circulator® 4000

Make a Cleaner Work Environment

- Free-standing general filtration system for weld fume control; ideal for manufacturing and fabrication facilities, and offers an economical alternative to a push/pull system
- Intended to supplement an existing source extraction system as well as natural draft/forced ventilation to reduce overall concentration of welding fume, dust and dirt in operator areas
- Green Drive™ control system reduces energy costs and increases filter life by continually monitoring operation and automatically adjusting airflow to maintain optimal performance levels
- Automatic Filter Cleaning System. Each time the system is switched off, an automatic cleaning cycle takes place. During this cycle the filter cartridges are cleaned by blasts of compressed air. The dislodged particulate is deposited in the drum beneath the filter

Push/Pull Systems

Improve General Workplace Air Quality

- Remove fume and metal particulate layer from the air of your metalworking facility before it settles back to the floor
- Ideal for environments where workers are in spaces where effective source capture is difficult
- Effective when fabricating large weldments and when the welder needs to frequently change positions

Prism® Thermal Suppression

Prevention, Detection, Suppression

- Prevent fire with a Spark Guardian™ spark arrestor and an Oil Guardian™ limestone feeder. The Spark Guardian helps to keep sparks and cigarette butts from reaching the combustible filter or dustbin debris. The Oil Guardian continuously injects limestone powder into the fume control system ductwork which absorbs vaporized oil generated when welding on oily parts. The resulting dry matter is blown off the filters during the cleaning cycle.
- The Prism® Thermal Suppression system mitigates risk of thermal events caused by welding and cutting particulate entering the fume extraction unit. This fully integrated fire suppression system is UL-listed, FM-approved and a recommended option by Lincoln Electric.

U/LINC™ Welding and Cutting Curriculum

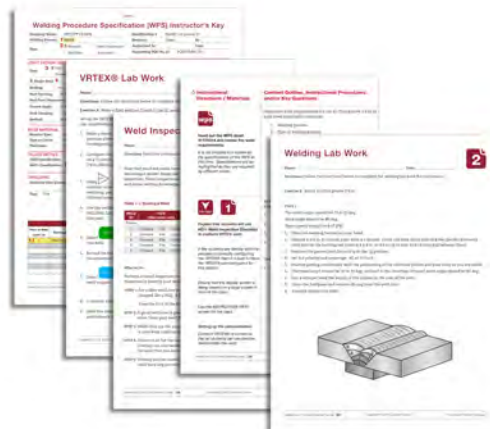

Learning Made Simple.

Take the guesswork out of lesson planning and curriculum development.

- Over 18,000 pages of curriculum, including lesson plans, videos, presentations, lab activities and student assessments
- Addresses welding safety to robotics and CNC plasma cutting and everything in between
- Aligned with AWS SENSE and state competencies and compatible with career pathways and career development programs
- Can be articulated between high schools and community colleges

Lincoln Electric Education Partner Schools (LEEPS)

In partnership with the National Coalition of Certification Centers (NC3), LEEPS is designed for institutions looking to offer a full suite of portable, stackable welding certifications.

LEEPS is a game changer, setting welding programs apart as best-in-class by:

- Providing curriculum and learning management resources necessary for standardizing welding education and advancing knowledge to the next level.
- Driving advancements into programs with valuable instructor professional development through Train the Trainer (TTT) to boost skills, credibility and confidence.
- Giving students a competitive advantage in the career marketplace with documented proven skills and knowledge.
- Positively impacting enrollment and graduation rates.
- Using the latest industry technology.
- Customizing the program to support specific industry needs.

Welding Safety Checklist

Hazard	Factors To Consider	Precaution Summary
Electric Shock Can Kill 	<ul style="list-style-type: none"> Wetness Welder in or on workpiece Electrode holder and cable insulation 	<ul style="list-style-type: none"> Insulate welder from workpiece and ground using dry insulation. Rubber mat or dry wood. Wear dry, hole-free gloves. (Change as necessary to keep dry.) Do not touch electrically "hot" parts or electrode with bare skin or wet clothing If wet area and welder cannot be insulated from workpiece with dry insulation, use a semiautomatic, constant-voltage welder or stick welder with voltage reducing device. Keep electrode holder and cable insulation in good condition. Do not use if insulation damaged or missing.
Fumes and Gases Can Be Dangerous 	<ul style="list-style-type: none"> Confined area Positioning of welder's head Lack of General ventilation Electrode types (i.e.: manganese, chromium, etc. – see SDS) 	<ul style="list-style-type: none"> Use ventilation or exhaust to keep air breathing zone clear, comfortable. Use helmet and positioning of head to keep fumes clear of the breathing zone. Read warnings on electrode container and Safety Data Sheet (SDS) for electrode Provide adequate ventilation to ensure airborne exposures remain below applicable limits. Use special care when welding in a confined area. Do not weld unless ventilation is adequate. Use a respirator unless exposure assessments indicate otherwise.
Welding Sparks Can Cause Fire or Explosion 	<ul style="list-style-type: none"> Containers which have held combustibles Flammable materials 	<ul style="list-style-type: none"> Do not weld on containers which have held combustible materials (unless strict AWS F4.1 procedures are followed). Check before welding. Remove flammable materials from welding area or shield from sparks, heat. Keep a fire watch in area during and after welding. Wear fire retardant clothing and hat. Use earplugs when welding overhead.
Arc Rays Can Burn Eyes and Skin 	<ul style="list-style-type: none"> Process: Gas-shielded arc most severe 	<ul style="list-style-type: none"> Select a filter lens which is adequate for your welding process under ANSI Z49.1, Section 4. Always use helmet when welding. Provide non-flammable shielding to protect others. Wear clothing which protects skin while welding.

Arc Welding Fumes and Gases

The **fume plume** contains solid particles from the consumables, base metal, and base metal coating. For common mild steel arc welding, depending on the amount and length of exposure to these fumes, most immediate or short term effects are temporary, and include symptoms of burning eyes and skin, dizziness, nausea, and fever. Long-term exposure to welding fumes can lead to siderosis (iron deposits in the lungs) and may affect pulmonary function. Bronchitis and some lung fibrosis have been reported.

Some compounds which may be in welding fume, and reported health effects of overexposure are below. See the SDS for the consumable product used for specific information.

- Barium** may cause severe stomach pain, slow pulse rate; irregular heartbeat, ringing of the ears, convulsion and muscle spasms. In extreme cases can cause death.
- Cadmium** fumes can be fatal even under brief overexposures, with symptoms much like metal fume fever.
- Chromium** and its compounds are on the IARC (International Agency for Research on Cancer) and NTP (National Toxicology Program) lists as posing a cancer risk to humans. Some forms of these metals are known or suspected to cause lung cancer in processes other than welding and asthma has been reported.
- Manganese:** Manganese overexposure may affect the central nervous system, resulting in poor coordination, difficulty in speaking, and tremor of arms or legs. This condition is considered irreversible.
- Nickel:** Nickel and its compounds are on the IARC (International Agency for Research on Cancer) and NTP (National Toxicology Program) lists as posing a cancer risk to humans.
- Silica:** Overexposure can cause severe lung damage (silicosis). Crystalline silica is present in submerged arc flux.
- Zinc:** Overexposure to zinc may cause metal fume fever with symptoms similar to the common flu.

Your work area has adequate ventilation when there is enough ventilation and/or exhaust to control worker exposure to hazardous materials in the welding fumes and gases so the applicable limits for those materials is not exceeded. See the SDS for the legal limits, the OSHA PEL (Permissible Exposure Limit), and the recommended guideline, the ACGIH TLV (Threshold Limit Value). Confirm that if the worker exposure does not exceed the applicable exposure limit for compounds in the fumes and gases by having an industrial hygienist take and analyze a sample of the breathing air. A respirator may be required if exposure cannot be controlled to the PEL or TLV.

Read the product label and material safety data sheet for the electrode posted in the work place or in the electrode or flux container to see what fumes can be reasonably expected from use of the product and to determine if special ventilation is needed. Know what the base metal is, and determine if these is any paint, plating, or coating that could expose you to toxic fumes and/or gases. Remove it from the metal being welded, if possible.

If you start to feel uncomfortable, dizzy or nauseous, you may be overexposed to fumes and gases, or suffering from oxygen deficiency. Stop welding and get some fresh air immediately. Notify your supervisor and co-workers so the situation can be corrected and other workers can avoid the hazard. Be sure you are following these safe practices, the consumable labeling and SDS and improve the ventilation in your area. Do not continue welding until the situation has been corrected.
